Education

RV Institute of Technology and Management **Bengaluru, Karnataka**
Bachelor of Engineering in Computer Science | CGPA: 8.98 *2022 – 2026*

Work Experience

Learners Byte Global Infotech **Jan 2026 – May 2026**
AI Intern *Bengaluru, Karnataka*

- Built **AI automation workflows** using **Python, n8n, APIs, and Generative AI tools** to automate data collection and processing.
- Worked with **LLMs, prompt engineering, AI agents, and API integrations** to develop AI-powered workflows.
- Developed a **Multi-Source AI Trend Aggregation and Summarization System** integrating external APIs to collect, process, and summarize technical content.
- Designed workflow-based data pipelines for **data ingestion, transformation, and processing** from multiple sources.

Projects

ML Powered Supply Chain Optimization Platform Python | FastAPI | React | LightGBM | Prophet

- Developed an end-to-end platform for **demand forecasting, inventory optimization, and risk assessment** using Python-based ML pipelines.
- Built **REST APIs and backend services using FastAPI** to expose forecasting and prediction functionality.
- Implemented data preprocessing and **feature engineering using Pandas and NumPy**.
- Developed ensemble forecasting using **Prophet and LightGBM**, with Random Forest and Logistic Regression for risk classification.
- Integrated backend APIs with a **React frontend** to provide interactive operational dashboards.

Real-Time Chat Application | Source Code Node.js | Express.js | MongoDB | React | Socket.IO

- Built a **real-time web application** supporting personal and group messaging using Node.js, Express.js, and MongoDB.
- Developed **REST APIs** for authentication, user management, and message operations.
- Implemented real-time communication using **WebSockets and Socket.IO**.
- Implemented **JWT-based authentication** and integrated Cloudinary for image uploads.

XAI Powered Network Intrusion Detection System | Source Code Python | Pandas | Dask | LightGBM | SHAP

- Built a machine-learning based network intrusion detection pipeline using the **CIC-IDS2017** dataset.
- Used **Pandas and Dask** for preprocessing, transformation, and efficient handling of large-scale network traffic data.
- Developed a **LightGBM classification pipeline** for network attack detection.
- Integrated **SHAP** for feature-importance analysis and model interpretability.

Plant Disease Detection App | Source Code React Native | Flask | Python | Machine Learning

- Developed a mobile application for plant disease detection using image classification.
- Built a **Flask backend API** connecting the trained ML model with the React Native application.

Technical Skills

Languages: Python, Java, JavaScript, SQL
Backend & APIs: FastAPI, Node.js, Express.js, REST APIs, WebSockets
Databases: MySQL, MongoDB
Cloud & Tools: Docker, Git, GitHub, Postman
ML & Data: Pandas, NumPy, Scikit-learn
Generative AI: LLMs, Prompt Engineering, AI Agents, n8n
Frontend: React, HTML, CSS

Publication

- Published research on **EDM parameter optimization using ensemble learning models with uncertainty quantification**.

Achievements & Certifications

Achievement: Top 10, CypherQuest 2025 (24-hour hackathon by DSATM)
Certifications: Cisco Networking Basics, Agile Scrum Foundation, Introduction to Cryptography
